

ALBERTA INNOVATES – TECHNOLOGY FUTURES

Alberta Innovates - Technology Futures (AITF) helps technical industries find solutions, develop products and move technologies to market. It's facilitating access to the strengths of our key partners that help support commercialization and grow new ventures. It's investing in and attracting research and entrepreneurial talent who can support these priorities.

AITF is a new entity, building upon the strengths of the Alberta Research Council, Alberta Ingenuity, iCORE and nanoAlberta. Some 700 AITF staff partner with thousands of companies, post-secondary organizations and the province's brightest researchers to stimulate research that solves challenges and creates jobs.

AITF is building on Alberta's already established advantage in platform technologies - like fossil-fuel energy production, nanotechnology, information communications technologies, and genomics - to enhance the technical capacity within Alberta's high-tech companies.

The organization's visionary programs in the area of clean technology focus on areas such as solar thermal, solar films, enhanced efficiencies, bio-fuels, carbon capture and storage, carbon conversion, and self-sustainable community infrastructure systems. Through these research directions and more, AITF is helping build strategic sectors that demonstrate jurisdictional advantage and diversify Alberta economy in a sustainable way.

Through all these efforts, AITF is setting the stage for a stronger next generation economy built on the foundation of work that originates in Alberta and benefits the globe.
