

Lixar IT

Lixar IT develops integrated web software that enables businesses in the clean-energy, telecom, health amongst other sectors to serve their customers. Clients include high profile blue chip companies, governments, NGOs and businesses of various sizes across Canada, the United States and Europe.

Lixar has proven itself in the clean tech sector as U.S.-based leading smart grid company Gridpoint Inc. acquired its Lixar SRS energy management solutions unit in 2009. This group offered sophisticated user interfaces and support to multiple communications protocols and devices and enabled GridPoint to enhance its enterprise-class software and establish a Canadian presence. Lixar still works very closely with Gridpoint and continues to grow its clean tech integration services division to address massive expected growth in this sector.

Lixar systems and delivery processes support a cooperative solutions-based approach which respects its clients' bottom line and development timeline. Lixar's service offerings include web presence, custom applications, system integration, process automation, data translation, white-label service augmentation and near-shoring support.

Lixar offices are located in Ottawa and Halifax. The Lixar teams understand business needs and are able to translate experience and technical ability into software that achieves real results.
