

## **Ontario Ministry of Research and Innovation**

Places that invest in innovation are home to the most rewarding jobs, strongest economies and best quality of life.

That's why Ontario created the Ministry of Research and Innovation (MRI): to focus the government's commitment to make innovation the driving force of Ontario's economy. Innovation is the key to growing our existing companies faster and creating successful new ones in areas where Ontario has the strengths to become global market leaders.

One of these areas is the green economy. The world is looking for cleaner ways to generate power, and for new ways to live and do business more sustainably. This represents a multi-billion dollar global market. It also means cleaner air and a more sustainable planet for our children.

Ontario plans to be at the forefront of this new, green economy. Ontario's Innovation Agenda is about becoming the best place in the world to take good ideas to the global marketplace. It's about turning global challenges like climate change into new jobs, and better lives for Ontario families.

When we invest in innovation, we are investing in a strong economy and healthy communities that provide high-quality jobs and better lives for people in Ontario.
